

INSTRUCTIONS

STEP 1

This is how you will receive your bottle of E-liquid with cap fitted (obviously full rather than three quarters full).

STEP 2

Start by unscrewing the child-proof cap. So that you have what resembles image 2. You will see that the nipple is highlighted. You must remove this nipple before proceeding. It is not glued on or a permanent part of the bottle.

To remove, find the collar along the bottom with either a finger nail or blunt knife. You should easily be able to prise or pull this off.

STEP 3

You should now be left with the bottle, the nipple and the child proof cap as seen in picture 3.

STEP 4

Now you need to take hold of both a needle nose cap and a rubber collar as seen in image 4.

STEP 5

Start with the rubber collar. This can only be fitted two ways, upside down or right way up, this shouldn't take you long to figure out the correct application. Press the collar down snug to the bottle.

STEP 6

Once the collar is fitted you can freely screw on the needle nose cap. Once you've done this you can attach the rubber bung on top of the needle for storage or for when not being used.
